\*<sup>1</sup> The two sentinel mice in #1 Rack of Room 209 was found MNV positive in June 23th, 2015. All mice in #1 Rack are transferred to other room and have done bio-redeviation again.

\*<sup>234</sup> The sentinel mice in #1 Rack of R209 was found MNV positive in Dec 14<sup>th</sup>,2015 again and #3 Rack of R209 was found fur mites. #6 Rack of R209 was found flagellates. The mice in the positive racks are transferred into R211.

\*<sup>5</sup> In February,2016, random 86 cages of mice in R209 were tested MNV , the satisfied result proved that MNV was not occurred during last 3 months.

In Apr,2016, random 107 cages of mice in R209 were tested MNV, and the results are all negative.

\*<sup>67</sup>In Mar ,2016, random 5 live mice were sent for testing fur mites and flagellates, and all negative.

\*<sup>8</sup> In Feb 28 2018, the sentinel mouse in #11 Rack of R209 was found *Klebsiella pneumonia* positive, while the sentinel mice from the same cage and random 5 live mice from #11 Rack were negative. At the same time, the sentinel mice of \*12 and #5 Racks were found MNV positive.

\*<sup>9</sup>In Mar 9 2018, 9 mice on #12 Rack of R209 were found fur mites positive and random 174 cage in R209 were negative. All fur mites positive mice belongs to only one laboratory and their mice were transferred to R104 and rederived. On Apr 8 2018, random 140 mice were tested again and all negative.
